PROFESSIONAL OVERVIEW

I'm a front-end developer, post-graduating in Software Engineering, with experience in systems analysis and development and ERPs (Enterprise Resource Planning) projects. I use creativity to find different solutions to the same problem, to make development easier and functionality more fluid. Experience in demanding roles and technical understanding. Easy to get along with, communication, common sense, and ethics combined with the moral concepts, values, and visions of the company. Easy adaptation to change, willingness and readiness to understand functions and absorb new learning.

I have experience in projects using AngularJS, Ionic, Vue.js, and Quasar Framework technologies. I also have a solid knowledge of agile methodologies such as Scrum and tools such as JIRA, Gitlab, and Azure DevOps. I have worked on projects such as NeoOffice, Odhen Services, Start Consig, and Discadora, where I contributed to developing new features, developed analysis dashboards, and carried out system maintenance. I have also developed, on my own, using the AI tools Copilot and Claude Code, which greatly assists in improving code.

In addition, I am always willing to learn new things, as well as be able to contribute my learning to the team. My main focus is on product quality, where I strongly prioritize issues such as good programming practices.

ACADEMIC QUALIFICATIONS

- High School/Computer Network Technician (2012 - 2015)
Centro Federal de Educação Tecnológica de Minas Gerais

- Degree in Mathematics (2017 - 2021)

Universidade do Estado de Minas Gerais - Ibirité

- Postgraduate in Software Engineering (2022 - 2023)

Pontifícia Universidade Católica de Minas Gerais

SKILLS

- Highly experienced with VueJs
- JavaScript, PHP, HTML, and CSS
- Angularjs, Zend, React, NodeJs, Vuex, and Quasar frameworks;
- Web Design (from the Saga school);
- SQL Database on the PHPMyAdmin, Oracle, MySql, and PostgreSQL platforms;
- Creation of APIs and web services;
- Publishing apps on the Play Store and Apple Store;
- Managing IndexedDB to store files in the browser;
- English - Advanced Reading and Understanding; Intermediate Writing and Conversation
- Java, Spring Framework, Azure, blob storage, junit Tests, Clean Code concepts
- Individual experience with the Copilot tool.
- Individual experience with the Claude Code tool.

WORK EXPERIENCE

Trainee Developer - Teknisa Software (2016-2017)
Technologies: AngularJS, JSON, PHP, SQL and Oracle

- Screen programming for restaurant delivery management software
- Branch versioning in GitLab

Full-Stack Developer - Teknisa Software (2017-2019)
Technologies: AngularJS, JSON, PHP, SQL and Oracle

- Programming delivery restaurant management software
- API for checking the status of restaurant orders
- Bank cards reconciliation management system
- Management of automated microservices

Math teacher (Internship) - Assprom (2019-2020)

- Teacher of young apprentices working in the Administrative City of Minas Gerais

Frontend Developer - Start Consig (2021-2022)
Technologies: VueJS, Vuex, JSON, Quasar Framework

- Programming software to manage a payroll loan sales system
- Programming dialer management software
- Creation of a payroll loan sales data dashboard
- API for checking dialer status

Junior Software Engineer - Neowrk (2022-2023)
Technologies: VueJS, Vuex, JSON, Vue Material, Test Utils, Agile Method

- Programming software to manage room reservation systems, parking lots, tables, lockers, etc.
 - Customizing and updating the styling of systems
 - Revision of other codes(Code Review)
 - Unit Tests Creation
-
-

Frontend Developer - Novadata (2023-2024)

Technologies: VueJS, Pinia, Tailwind, Quasar, Vite

- Support for Loan Simulation System in Brazil (FGTS)
- Payment system support with facial identification
- Versioning and deploying systems to the testing and production environment in Git

Developer Analyst II - Quintess (2024-Now)

Technologies: DBeaver, Java, Springboot, Angular, VueJS, Keycloak

- Support for systems of the Brazilian Ministry of Justice
- Branch update and deployment done on Azure DevOps

EXTRACURRICULAR WORKS

- Final Course Work carried out at the Ezequiel Dias Foundation in 2015. • Development of a laboratory management system and a website for the NTBL (Natural Toxin Bioprospection Laboratory);
- Presentation of a seminar entitled "How HTML/CSS emerged and how they influenced the presentation of a website" at the 1st Workshop on Introduction to Computational Biology at LBTN/FUNED and DECOM/CEFET-MG in 2015.
- Final Project carried out at UEMG - Ibirité, with the theme: "Creating an application on the Scratch platform to assist teachers in teaching basic operations and introducing geometry to 6th grade elementary school classes." in 2021
- Development of landing pages and CRM systems using Claude Code and the Spec-Driven development method.
